

## ABSTRACT OF THE DISCLOSURE

1           A cooler chest and can dispensing structure is described for individually  
dispensing cans therefrom. The structure comprises a cooler chest having a can  
dispensing structure positioned in the cooler compartment which extends between the  
5       opposite ends of the cooler chest. The can dispensing structure is sealed from the  
interior of the cooler chest to prevent ice and water therein from coming into contact  
with the cans.
